

ABSTRACT OF THE DISCLOSURE

The present invention relates to a travel route display apparatus capable of displaying travel route segments of great importance for the operator in a clearly recognizable manner for the operator. The travel route display apparatus comprises

5 travel distance storage means (107) for storing therein a travel distance of a moving object traveling along the searched travel route on each of the links, travel speed storage means (108) for storing therein a predetermined travel speed of the moving object traveling along the travel route, distance time conversion means (109) for converting the travel distance into travel time for each of the links, travel time storage means (110) for

10 storing therein the travel time obtained from the distance time conversion means (109), display mode selecting means (111) for selecting one of two display modes including a time display mode and a distance display mode, and display means (113) for displaying the travel route, and in which the display means (113) is capable of displaying the travel route on the basis of the travel time of the moving object.
